The image features two elegant, faceted crystal glasses, possibly champagne flutes, positioned on the left side. They are set against a dark, speckled quartz tile floor with a grid pattern. The lighting creates highlights and reflections on the glass surfaces and the floor. The overall aesthetic is sophisticated and modern.

## N&C Gulfstone Quartz

N&C GulfStone Quartz is an agglomerate stone quartz tile range that boasts a sense of luxury, delicate mirror chips are scattered within the tile body which catch the light at every opportunity.

N&C GulfStone Quartz are long lasting due to the fusion of hard quartz and resin make them scratch and stain resistant.

N&C GulfStone Quartz can be used on a variety of surfaces to meet a host of specific purposes and requirements. The most common use is interior Floors and Walls.

Produced using Industry leading technology from Breton S.P.A of Italy the product can be defined as a high density material as it is made of granules of high grade quartz/silica (93%) blended with engineered polyester resin, an organic compound as a binding agent.

N&C GulfStone Quartz can be used with undertile and underfloor heating systems when installed appropriately using the Nicobond range of Adhesives, Screeds and Grouts (see website for details).

For peace of mind we recommend that N&C GulfStone Quartz is sealed prior to grouting using Nicobond Solvent Based Sealer.
